Summary

Full-stack developer with experience building and deploying production-ready web applications, AI-powered automation systems, and scalable backend services. Skilled in designing RESTful APIs, developing secure and multi-tenant architectures, orchestrating asynchronous workflows, and delivering end-to-end solutions across modern technology stacks. Focused on creating secure, maintainable, and scalable systems grounded in strong engineering fundamentals.

Education

Bachelor of Technology in Computer Science and Engineering Expected 2028
Rajiv Gandhi Institute of Technology, Kottayam

Higher Secondary Education 2023 – 2024
St. Sebastians Higher Secondary School

Skills

Languages: TypeScript, JavaScript, Python, Java, C
Frameworks & Libraries: React.js, Next.js, Node.js, Express.js, FastAPI
Databases: PostgreSQL, MongoDB, Supabase
Tools: Git & GitHub, Docker, Postman, n8n, Vercel

Experience

Full Stack Intern Mar 2026 – Present
Zynact *Remote*

- Designed and developed backend services for a multi-tenant AI agent automation platform, supporting secure and scalable workflow execution.
- Built and orchestrated 5 specialized AI agents operating asynchronously to enable complex automated workflows.
- Implemented tenant-aware authentication and data isolation mechanisms, ensuring secure access and separation of organizational data.

Full Stack Developer Dec 2025 – Present
Flink *Remote*

- Led development of “Hostel Finder”, a student accommodation discovery platform, building the majority of its frontend and core backend functionality.
- Developed key user-facing features, business workflows, and API integrations supporting accommodation discovery and management.
- Improved application performance, configured SEO best practices, and coordinated deployment processes for production releases.

Technical Team Jan 2026 – Present
Computer Science Association *RIT, Kottayam*

- Provided technical guidance for the official website of “TechThrive 2.0”, a national-level hackathon hosted by the department.
- Contributed to development and maintenance of the platform, ensuring stable performance and usability.
- Collaborated with the organizing team to ensure smooth technical setup and successful execution of the event.

Projects

TempSpace – Temporary File Sharing Platform (React, Node.js, Supabase)

- Built a temporary file-sharing platform that allows users to create temporary spaces using short codes without requiring authentication.
- Implemented automatic expiration and manual destruction mechanisms to ensure secure, non-persistent file storage.

GitHub: [Source](#)

Assignment Agent (N8N, FastAPI, Python, Gemini API)

- Built a full-stack AI automation system that processes assignments (PDF, DOCX, PPTX, images) via Web UI or Telegram using LLM-powered workflows.
- Integrated Telegram Bot API and email delivery workflows, enabling seamless automated task completion and multi-channel result distribution.

GitHub: [Source](#)

Ani-JS – Lightweight Animation Library (JavaScript, CSS, NPM)

- Created a minimal JavaScript animation library offering utility-style classes for clean UI animations without Tailwind dependency.
- Published as an NPM package and used it to power portfolio animations with optimized performance and minimal CSS overhead.

GitHub: [Source](#)

Extra-Curricular Activities

- Conducted an AI and automation workshop on n8n for 40+ participants, demonstrating practical workflow automation and real-world use cases.
- Participated in several hackathons and Capture The Flag (CTF) competitions, strengthening problem-solving and cybersecurity skills.
- Contributed to technical communities through Tinkerhub and Computer Science Association initiatives, supporting events and peer learning activities.
